RYVEX TECHNOLOGIES / FOUNDER'S NOTE

A Message from the Founder

I Don't Just Imagine the Future. I Work to Build It.

I'm **Raman Luthra**, a 16-year-old robotics enthusiast, student innovator, and aspiring entrepreneur with a passion for turning ideas into real-world technology.

My interest goes beyond understanding how technology works. I want to know how it can be built, improved, and used to solve meaningful problems. From robotics and autonomous ground vehicles to intelligent waste segregation and environmental technology, every project I explore gives me an opportunity to learn, experiment, and push my limits.

My work includes projects such as **ARCR-UGV, EcoGuardian Ecosystem, VIGIL-X4, and Smart Waste Segregation**. Each represents a different challenge and an opportunity to explore engineering, electronics, automation, and practical problem-solving.

I believe innovation isn't about having all the answers from the beginning. It's about asking better questions, testing ideas, learning from failure, and having the discipline to keep improving until an idea becomes something real.

I'm still at the beginning of my journey, and that's exactly what makes it exciting. Every prototype, every experiment, and every challenge is helping me develop the skills and mindset needed to build more capable systems and pursue bigger ideas.

My Vision

My goal is to build technology that goes beyond demonstrations—to develop practical, intelligent, and useful solutions in robotics, automation, and sustainable engineering.

I want to keep learning, create projects that solve real problems, collaborate with people who challenge my thinking, and eventually build a technology company around meaningful innovation.

> **“I'm not here to claim that I've built everything. I'm here to keep building, keep learning, and see how far engineering can take an idea.”**

This is only the beginning.

— Raman Luthra

Founder & Student Innovator
